

## Workshop on Opportunities and Challenges under the Global Net-zero Transformation Held by BNEF and TPRI of Taipower

(R&D Planning Office: Ms. Hsiang-Lin Chang)

To understand the issues about carbon neutrality after the Glasgow Climate Summit (COP26) and realize the challenges and opportunities faced by the power industry globally, Taiwan Power Research Institute (TPRI) held the “BNEF Opportunities and Challenges under the Global Net Zero Transformation “ workshop and specially invited Mr. Yang, chairman of TPC, to give an opening speech. The participants included directors of the Board, members of the conference report, planning office and TPRI. A total of 77 people participated in this workshop.

Jon Moore, CEO of BNEF, and analysts were invited to share their views on the opportunities and challenges of global power industry under the pressure of net-zero transformation after COP26 in the form of

video conference. Discussed topics included global net-zero goal and power industry outlook, the impact of energy and climate policies on the power industry, development status of energy storage, hydrogen power generation technology and the digital transformation strategies in response to the wave of digitalization. These valuable views and reports help participants quickly understand the global trend of power industry under the situation of net-zero emissions.

By the help of BNEF’s professional viewpoints and reports, TPC could use them to set strategies and goals for net-zero emissions in 2050. The workshop was a great success and participants all expressed that they received fruitful results and were deeply inspired.
