

TPC Electric Technology Foresight Elite Forum

(R&D Planning Office: Ms. Hsiang-Lin Chang)

In front of the challenges of energy transformation and power market opening, it is a critical moment for Taiwan Power Company (TPC) to invest in overall transformation and upgradation to respond to the needs of the government and the public and to conform with international trends. In order to accurately grasp the forward-looking power technology trends at the request of Taiwan's future electricity market environment, ensure the direction and benefits of R&D investment, and quickly consolidate the internal consensus of the company's R&D and business sectors, Taiwan Power Research Institute (TPRI) held the " TPC Electric Technology Foresight Elite Forum" at the auditorium of TPC headquarters on August 6, 2020.

TPC invited Anurag Chatterjee, the Asia-Pacific head of Lienwei International Verification (DNV GL), and Jon Moore, CEO and analyst group of Bloomberg New Energy Finance (BNEF) to share their knowing about the trends of power technology development and experience of renewable energy development by the aid of video equipment in the morning. These valuable experiences help TPC quickly grasp the global electric

industry trend, inspire the employees how to foresee TPC's future power technology application strategy for the next 10 years.

In the afternoon, TPC invited domestic experts and scholars , namely professor Chang Wen-Kung, vice president of Chung Cheng University, General Manager Chung of TPRI, Director Liu of Department of Environmental Protection, Director Tsai of Department of Renewable Energy, Director Wu of Department of System Operations, and Director Chen of Department of Power Distribution to join the forum to exchange their opinions and experiences upon forward-looking technologies for the next 10 years and the technical blueprint required by the future power market.

In this forum, TPC management team , domestic scholars and elites gathered together to provide valuable advices for the prospective power technology layout and R&D blueprint for 2030 Taiwan power market . There were in total 235 people from 37 TPC units participated in this forum. These participants all expressed that they had fruitful harvest and were deeply inspired.
