

## Taipower-ECCT LCI Workshop Series Floating Wind Policy and Technology Workshop

(R&D Planning Office: Ms. Hsiang-Lin Chang)

TPRI co-organized the "Floating Wind Policy and Technology" Workshop with ECCT LCI on July 25, 2023. Participants included the Bureau of Energy of the Ministry of Economic Affairs and experts from the domestic and foreign energy industry to share and exchange cases on floating wind power technology. About 90 people attended the meeting.

Experts from various countries have stated that policy, funding, and supply chain are the three major elements for developing floating offshore wind farms.

They also pointed out that Taiwan's initial floating wind turbine demonstration site was limited by environmental and technical factors, and it was recommended to be set up in the Taiwan Strait. Due to the fact that floating offshore wind farm technology is still under development, a demonstration plan must be completed before large-scale construction. Only after obtaining relevant operating data can it be used as a basis for expansion.
